YOUR MAIL IS OUR BUSINESS

The FPi 500 Tabletop Inserter Your perfect mail handler

FPi500series

📧 **Folding and inserting made easy**

The FPi**500** a compact tabletop inserting system that delivers high performance in a small package and fits into every office. The FPi**500** pays for itself even in offices that mail just 50 letters a day. Folding and inserting letters can take a good 30 minutes of your time, while the FPi**500** does the job in just 3 minutes - at the press of a button, loading letters, envelopes and supplements into the corresponding stations - it even seals the finished envelopes!

With three automatic feeder stations the FPi**500** delivers maximum flexibility. Each station can hold 100 sheets of paper, working without interruption even when the other station is empty - the FPi**500** can fold and insert up to 1,350 letters an hour.

Reload without stopping the machine!

📧 **Perfect for flyers and brochures**

The FPi 2000 Series **2015 2020 2025**

FPi2000series

The FPi**2000** series of table-top mail inserters will win you over with its ease of operation and reliability.

The system can fold documents of various sizes to fit into C6, DL and C5 envelopes.

The series lends itself to a variety of applications - be it the daily miscellaneous mail to multi-part mass mailings. Small formats, pre-folded materials, reply cards or return envelopes can be added to letters quickly and easily.

Up to three automatic feeder stations provide maximum versatility and capacity.

FPi2015 - one automatic A4 document station that feeds material page by page. A second automatic station feeds enclosures (eg. letter, flyer plus reply vehicle up to A5).

FPi2020 - two automatic A4 document stations which can be set up to feed A4 formats as well as envelope shaped enclosures (brochures, flyers, reply cards or envelopes).

FPi2025 - two automatic A4 document stations plus an enclosure feeder for assembling multi-part mailings (eg. letter, flyer plus reply vehicle up to A5).

📧 **Designed for small to moderate quantities**

Each model includes a manual feed enabling the operator to feed up to five sheets of paper (loose or stapled) by hand and add automatically fed contents. Inserters equipped with more than one document station can be set up for uninterrupted operation when processing high volume 'single item' mailings with or without enclosure. When one station empties, the other station starts automatically, enabling the first to be refilled without pause.

Each automatic document station can be set to feed several sheets per envelope. Feed, fold and insert up to three sheets per job, or up to five sheets when using OMR.

The FPi 4030 Series

4030 4030S

FPi4030series

Three multifunctional feeders secure perfect processing of your individual mail with high speeds of up to 3500 letters per hour. OMR function for processing of documents using bar codes.

📧 Packed with exciting features

Daily Mail

Using this function you can process documents which are not suited for automatic processing, for instance stapled documents.

Feeder-swap

As soon as a feeder is empty, the system will automatically switch to another feeder while you are reloading documents.

Eight in One

The folding device can fold up to 8 sheets simultaneously.

Fill & start

The system can detect document and envelope format as well as folding settings automatically. This way, you can process simple jobs quickly without the need for time consuming adjustments.

Fold only

You can also use the FPi4030 & FPi4030s for its flexible document folding only option.

Real sheet control

The FPi4030 & FPi4030s features an electro-mechanical double feed detection which reliably measures the paper thickness upon feed-in from the stations.

FPi4030s

The Special Feeder only available on the FPi4030s is designed for the feeding of more difficult types of inserts for example very glossy mailers and leaflets as well as thicker booklets, etc.

The FPi 5500 Series

FPi5500series

📧 Perfect for multiple tasks

Simple operation, reliable letter handling and a high degree of flexibility. The FPi5500 can handle up to 4000 letters per hour in C6, DIN long, and C5 formats and up to 60000 letters per month. Security and monitoring functions ensure that every envelope is correctly and completely filled.

The FPi5500 handles up to 10 pages per envelope, mailings with or without supplements, invoices and personalised mail. The intelligent modular construction allows the system to be configured with 2 to 6 stations as well as customer-specific solutions.

Fold-down display with touchscreen

Regardless of which side you wish to organize your work from, the display with its full-color touchscreen is where you need it.

Meets every demand

The modular construction of the FPi5500 allows the addition of extra feeder stations, in pairs, for up to six stations total. Customer-specific Flex configurations allow even greater job flexibility.

Fold-down display with touchscreen for convenient operation

Manually adjust the touchscreen according to how you wish to organise your workflow. Just turn the display to where you need it. The intuitive operating instructions use pictograms and clear text directions for easy programming.

OMR (optional)

Optical Mark Reading (OMR) system uses printed marks to automatically identify document sequence and size.

This enables, for example, the processing of personalized mailings, flexible control of various supplements or exclusion of duplicate copies.

FPI Series

Think differently about how you prepare and send your mail

Pricing in Proportion (PiP) the pricing structure from Royal Mail means that not only does the price of a mail item depend on weight, but the size and thickness as well, one simple fold can save you up to 30% on 1st class rates. Our range of folding and inserting machines not only save you money - but also valuable time, eliminating the need to hand-fold and stuff your mail. From desktop to complete mailing systems we have a machine to suit your needs and budget.
