

TMR c1000

High speed franking and envelope printing system

- Increase mailroom productivity
- Full-colour envelope printing
- Download options from PC
- Colour touch-screen display
- Differential weighing option
- Power or drop envelope stacker
- Up to 180 letters per minute

Compact Footprint

The small- to mid-volume c1000 digital mailing machine prints full-colour promotional messages as it franks, at speeds up to 180 letters per minute. It offers all the connectivity and performance of the advanced c series at an attractive price, with options like a differential weighing platform, envelope power stacker and barcode scanner available to further raise the specification. Weighing under 28kgs and measuring 1257mm x 635mm, it has a compact, lightweight footprint for office use.

Power Of The Envelope

Like its larger c series starter models, the c1000 can print postal blue,

black & white and process colours for franking envelopes and labels, as well as employing the power of the envelope to increase response rates with colourful promotional messages. The integrated accounting app allows expenditure by postal rate, format and weight to be analysed across as many as 2000 internal users. Proven Mailmark franking technology further enables every piece of mail to be sent at the best possible rate.

Use the power of the envelope to get more mail opened

Mailmark Franking

Mailmark technology applies an intelligent 2D barcode that helps track mailed items with extreme precision. Royal Mail guarantees that items sorted using Mailmark will always benefit from the cheapest tariff available. The system also provides immediate price updates, faster franking and routine tracking reports, superseding SMART enabled franking machines.

Processing Speed

To help customers compare efficiency, Letter Processing speeds provide the number of standardised letters a machine is able to frank in one minute, with a reduced number for WOW-enabled machines when running mixed mail. This rating is useful to know when scheduling mailing strategies and volume requirements.

Accounts & Presets

To help speed up your mailing and keep departmental expenditure separate, franking machines can provide programmable shortcuts. Named departmental Postage Accounts allow you to track and report for specific business areas, such as Sales, HR and Accounts, whilst the most frequent mail runs can be allocated Job Presets, such as 2nd Class Signed For.

Envelope Messaging

To make the most of franked mail, you can turn every sent item into a powerful promotion, with your company logo and/or marketing message printed alongside the postage. With various pre-loaded options and bespoke settings, you can change the message by department, priority, season or offer, providing a professional finish without the need for printed stationery.

Postage Reporting

By linking the machine's postage meter directly to your secure online account, Inview Analytics provides easy-to-use access to every element of your postal expenditure. There are numerous standard reports to help manage your mail, or you can customise the system to your reporting requirements. This functionality is completely scalable for all business sizes and sites, providing world-class management and control, to help you save more.

Touch-screen Interface

The machine's detachable, touch-screen display enables authorised operators to select the required service from a series of drop-down screens, allowing any task to be completed quickly and efficiently. The system guides the user intuitively through all inbound and outbound mailroom processes.
