TMR **c2000**

Communicates effectively with mail recipients

- **Mailmark franking economy**
- **Full-colour envelope printing**
- **Sorts by weight and size**
- **Optional power stacker**
- **Colour touch-screen display**
- **Prints postage on labels**
- **Inline envelope stacker**

Download PC Graphics

The TMR c series is a digital mailing system that allows the user to create custom-designed content on a PC and download directly onto the machine for use on mail runs. The c2000 model is intended for medium- to large-scale mailing operations, with processing speeds up 180 lpm, the optional power stacker giving the flexibility to produce high volumes of mail. The integrated accounting feature enables postage expenditure to be monitored by class, format and weight across 50 standard or 3000 optional internal accounts.

Integral Printers

The c2000 has two integrated printers, one for postal franking and the other for handling monotone or process colour, for printing graphics and messages onto envelopes. This Mailmark-compliant system also incorporates standard Dimensions-on-the-Way functionality for inline measuring of size and Weigh-on-the-Way for determining postage based on weight, to make processing mixed mail much faster.

High speed processing and attention grabbing graphics

We go **Beyond Mailing**

Mail Management | Mailing Equipment | Postal Discount | Complete Support

The Mailing Room
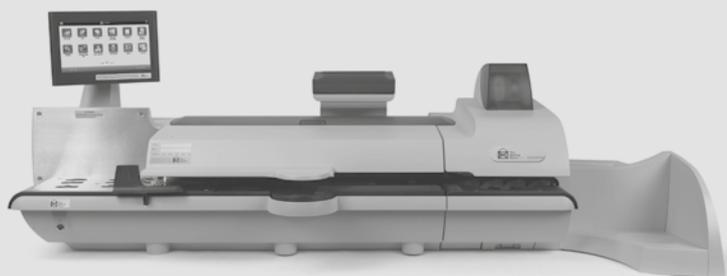

TMR **c2000**

Letters Per Day	300+
Franking Technology	Mailmark
Letter Processing (up to per min)	180 (110 WOW)

Mailmark Franking

Mailmark technology applies an intelligent 2D barcode that helps track mailed items with extreme precision. Royal Mail guarantees that items sorted using Mailmark will always benefit from the cheapest tariff available. The system also provides immediate price updates, faster franking and routine tracking reports, superseding SMART enabled franking machines.

Processing Speed

To help customers compare efficiency, Letter Processing speeds provide the number of standardised letters a machine is able to frank in one minute, with a reduced number for WOW-enabled machines when running mixed mail. This rating is useful to know when scheduling mailing strategies and volume requirements.

Mixed Mail - WOW & DOW

The inline Weigh-on-the-Way and Dimensions-on-the-Way features provide the ability to automatically process mixed outbound mail, by verifying the length, width, thickness and weight of each item as it travels through the franking machine. There is no need to pre-sort mail into the same sizes and weights, so high volume mail runs become effortless, with the correct postage rate applied every time.

Envelope Messaging

To make the most of franked mail, you can turn every sent item into a powerful promotion, with your company logo and/or marketing message printed alongside the postage. With various pre-loaded options and bespoke settings, you can change the message by department, priority, season or offer, providing a professional finish without the need for printed stationery.

Full-Colour Printing

Studies show that colour headlines and graphics on envelopes and packages increase openability by 250%. This facility provides complete control over full-colour, envelope-width printing, enabling the user to upload graphics, business logos and promotional messages from any desktop PC, for applying onto envelopes and labels on franked mail.

Touch-screen Interface

The machine's detachable, touch-screen display enables authorised operators to select the required service from a series of drop-down screens, allowing any task to be completed quickly and efficiently. The system guides the user intuitively through all inbound and outbound mailroom processes.
