

# TMR c3000

Print as you frank in  
high resolution colour

- Sorts by weight and size
- Inline envelope sealer
- Prints messages in colour
- Optional weighing platforms
- Prints postage on labels
- Easy-to-use touch screen
- Drop or power stacker

#### Web-Enabled

The c series digital franking system combines web-enabled connectivity and outstanding productivity, providing a better way of communicating with mail recipients. The top of the range c3000 is the fastest in its class and is capable of producing up to 7000 envelopes per hour, at processing speeds upwards of 310 letters per minute. Its onboard Mailmark technology guarantees that every piece of mail is sent at the correct postal rate, while further savings result from reduced envelope inventory and shorter mail-creation lead times.

#### Print-Shop Quality

The c3000 offers full-colour online envelope printing, producing print-shop quality graphics and promotional messages that prompt higher response rates. The system also includes as standard Weigh-on-the-Way and Dimensions-on-the-Way functionality, which ensures applying the correct postage to each and every piece of mail, based on weight, thickness and dimensions.

A powerhouse, full-colour system that saves time, cuts costs and helps make money

## Mailmark Franking

Mailmark technology applies an intelligent 2D barcode that helps track mailed items with extreme precision. Royal Mail guarantees that items sorted using Mailmark will always benefit from the cheapest tariff available. The system also provides immediate price updates, faster franking and routine tracking reports, superseding SMART enabled franking machines.

## Mixed Mail - WOW & DOW

The inline Weigh-on-the-Way and Dimensions-on-the-Way features provide the ability to automatically process mixed outbound mail, by verifying the length, width, thickness and weight of each item as it travels through the franking machine. There is no need to pre-sort mail into the same sizes and weights, so high volume mail runs become effortless, with the correct postage rate applied every time.

## Differential Weighing

By determining the difference between the initial and residual weights of multiple items placed on the scale, this feature allows one item at a time to be removed and franked correctly. This is useful for when you have a multiple mail pieces with different weights, but all using the same class for postage, such as envelopes with varying numbers of enclosed pages.

## Accounts & Presets

To help speed up your mailing and keep departmental expenditure separate, franking machines can provide programmable shortcuts. Named departmental Postage Accounts allow you to track and report for specific business areas, such as Sales, HR and Accounts, whilst the most frequent mail runs can be allocated Job Presets, such as 2nd Class Signed For.

## Full-Colour Printing

Studies show that colour headlines and graphics on envelopes and packages increase openability by 250%. This facility provides complete control over full-colour, envelope-width printing, enabling the user to upload graphics, business logos and promotional messages from any desktop PC, for applying onto envelopes and labels on franked mail.

## Online Connectivity

The system's web-enabled architecture provides online access to the internet, facilitating the downloading of updated software, the replenishment of postage values, access to Royal Mail services, tracking of packages and more, all via the colour touch-screen display. This facility also allows high-speed transfer of data to and from the system.
