

TMR s1000

Affordable entry level model
to powerful s-series system

- Mid-volume mailing operation
- For sending and receiving items
- Promotional colour printing
- Records all incoming deliveries
- Mail up to 180 letters per minute
- Intuitive colour touch screen
- Helps mailroom run like clockwork

Economical System

This economical, mid-volume mailing, shipping and delivery system is the entry-level model to the ground-breaking TMR s-series range. The s1000 provides a simple, more streamlined method of sending letter mail and large envelopes, whilst the receiving application accurately logs all incoming packages and documents, using the integrated barcode scanner, and provides an audit trail of inbound deliveries. With two printers, it can apply promotional messages and return addresses in black or colour, which means no more buying and storing pre-printed envelopes and labels.

Thick And Thin Envelopes

For letters, the s1000 will send and print postage marks at up to 180

letters per minute, handling thick and thin mail, as well as small and large envelopes, using its in-built differential weighing. The system guides operators with its easy-to-follow menus and colour touch screen and users can readily access all printing and mailing applications hosted in the software. For inbound deliveries, the s1000 and its integrated barcode scanner will instantly log all package information, tracking the carrier, recipient, date and time of receipt.

The s1000 gives unique control over envelope and label printing, eliminating premiums paid for special envelope stock

Powered By	Pitney Bowes

Please Note all specifications are variable and for guide only.
Confirm specific machine details with your sales contact.

Mailmark Franking

Mailmark technology applies an intelligent 2D barcode that helps track mailed items with extreme precision. Royal Mail guarantees that items sorted using Mailmark will always benefit from the cheapest tariff available. The system also provides immediate price updates, faster franking and routine tracking reports, superseding SMART enabled franking machines.

Processing Speed

To help customers compare efficiency, Letter Processing speeds provide the number of standardised letters a machine is able to frank in one minute, with a reduced number for WOW-enabled machines when running mixed mail. This rating is useful to know when scheduling mailing strategies and volume requirements.

Envelope Messaging

To make the most of franked mail, you can turn every sent item into a powerful promotion, with your company logo and/or marketing message printed alongside the postage. With various pre-loaded options and bespoke settings, you can change the message by department, priority, season or offer, providing a professional finish without the need for printed stationery.

Postage Reporting

By linking the machine's postage meter directly to your secure online account, Inview Analytics provides easy-to-use access to every element of your postal expenditure. There are numerous standard reports to help manage your mail, or you can customise the system to your reporting requirements. This functionality is completely scalable for all business sizes and sites, providing world-class management and control, to help you save more.

Inbound Management

The receipt and management of inbound packages is streamlined, using onboard software and an optional digital scanner. The system instantly logs package information, including courier, recipient, sender and date & time of receipt, offering the option of alerting the in-house recipient by email. Total mailroom time savings of up to 75 minutes per day are possible.

Touch-screen Interface

The machine's detachable, touch-screen display enables authorised operators to select the required service from a series of drop-down screens, allowing any task to be completed quickly and efficiently. The system guides the user intuitively through all inbound and outbound mailroom processes.
