

TMR d160

Makes postal budgets go much further

- Intuitive LCD display
- Space-saving footprint
- Up to 40 letters per minute
- Allocates across 25 accounts
- Envelopes up to 9.5mm thick
- 2.5k capacity weighing platform
- Automatic date advance

Mailmark Compliant

The latest d160 digital franking machine is the ideal choice for sending between 20 and 75 items per day, at processing speeds up to 40 letters per minute. Thanks to integral Mailmark technology, it guarantees that every piece of mail is being sent at a significantly lower cost than non-SMART franking machines or stamps, as well as the capacity to reclaim VAT where applicable. Its inbuilt scale that can weigh up to 2.5kg automatically ensures that the correct postage is paid, while an internal clock with date advance means that mail cannot be returned because it was wrongly franked.

Unobtrusive Presence

The d160 machine will sit unobtrusively on a desktop and operate with minimal noise, so it won't disturb other office activities. The installation menus displayed on the control panel prompt users through all setup and process functions, so there is no need for a specialist operator. This system will also allocate postal spend across up to 25 accounts, whilst unauthorised access is regulated by PIN number.

If you are using outdated franking technology, the d160 will save you money and time

Mailmark Franking

Mailmark technology applies an intelligent 2D barcode that helps track mailed items with extreme precision. Royal Mail guarantees that items sorted using Mailmark will always benefit from the cheapest tariff available. The system also provides immediate price updates, faster franking and routine tracking reports, superseding SMART enabled franking machines.

Processing Speed

To help customers compare efficiency, Letter Processing speeds provide the number of standardised letters a machine is able to frank in one minute, with a reduced number for WOW-enabled machines when running mixed mail. This rating is useful to know when scheduling mailing strategies and volume requirements.

Envelope Messaging

To make the most of franked mail, you can turn every sent item into a powerful promotion, with your company logo and/or marketing message printed alongside the postage. With various pre-loaded options and bespoke settings, you can change the message by department, priority, season or offer, providing a professional finish without the need for printed stationery.

Postage Reporting

By linking the machine's postage meter directly to your secure online account, Inview Analytics provides easy-to-use access to every element of your postal expenditure. There are numerous standard reports to help manage your mail, or you can customise the system to your reporting requirements. This functionality is completely scalable for all business sizes and sites, providing world-class management and control, to help you save more.

Online Connectivity

The system's web-enabled architecture provides online access to the internet, facilitating the downloading of updated software, the replenishment of postage values, access to Royal Mail services, tracking of packages and more, all via the colour touch-screen display. This facility also allows high-speed transfer of data to and from the system.
