

TMR m400

Maximises mailroom productivity

- Streamlined, compact design
- Automatic mail processing
- Integrated envelope sealer
- Mailmark-compliant technology
- User-friendly control centre
- Crisp, digitally-printed images
- Information management reporting

Automated System

The m400 digital mailing system improves productivity in a range of office environments, offering automated franking, envelope sealing and franking at speeds up to 120 items per minute. The easy-to-use keyboard and control panel, integrated scale and sealer, tape-strip feeder and automatic date and time stamping all add to the efficiency of this streamlined solution. It all adds up to reduced mail preparation time, with further savings achieved by five pre-sets for commonly-used jobs.

Digital Printing

The integrated weighing platform ensures the correct value postage

for every item, while Mailmark technology guarantees that everything is mailed at a lower cost than regular franking machines. The onboard digital printer allows mailing pieces to be transformed with eye-catching promotional messages, with an optional feature enabling the overprinting of a return address. The date and time stamping capability also ensures incoming mail is recorded efficiently.

This automatic digital mailing system brings large mailroom productivity to any office

Mailmark Franking

Mailmark technology applies an intelligent 2D barcode that helps track mailed items with extreme precision. Royal Mail guarantees that items sorted using Mailmark will always benefit from the cheapest tariff available. The system also provides immediate price updates, faster franking and routine tracking reports, superseding SMART enabled franking machines.

Processing Speed

To help customers compare efficiency, Letter Processing speeds provide the number of standardised letters a machine is able to frank in one minute, with a reduced number for WOW-enabled machines when running mixed mail. This rating is useful to know when scheduling mailing strategies and volume requirements.

Differential Weighing

By determining the difference between the initial and residual weights of multiple items placed on the scale, this feature allows one item at a time to be removed and franked correctly. This is useful for when you have a multiple mail pieces with different weights, but all using the same class for postage, such as envelopes with varying numbers of enclosed pages.

Accounts & Presets

To help speed up your mailing and keep departmental expenditure separate, franking machines can provide programmable shortcuts. Named departmental Postage Accounts allow you to track and report for specific business areas, such as Sales, HR and Accounts, whilst the most frequent mail runs can be allocated Job Presets, such as 2nd Class Signed For.

Envelope Messaging

To make the most of franked mail, you can turn every sent item into a powerful promotion, with your company logo and/or marketing message printed alongside the postage. With various pre-loaded options and bespoke settings, you can change the message by department, priority, season or offer, providing a professional finish without the need for printed stationery.

Postage Reporting

By linking the machine's postage meter directly to your secure online account, Inview Analytics provides easy-to-use access to every element of your postal expenditure. There are numerous standard reports to help manage your mail, or you can customise the system to your reporting requirements. This functionality is completely scalable for all business sizes and sites, providing world-class management and control, to help you save more.
