

TMR s1500

Makes mailroom tasks simple and more productive

- Streamlines office workflow
- Small and medium enterprises
- Inbound deliveries management
- Incorporates WOW & DOW feature
- Sorts mixed mail sizes automatically
- Handles letters up to 16mm thick
- Onboard weighing platform

Simplify Processing

Part of our fully integrated mailing and receiving series that sets new standards for office and mailroom productivity, the TMR mid-range s1500 model can weigh and process mixed mail up to 16mm thick, at speeds up to 120 letters per minute or 60 lpm using the Weigh-on-the-Way mode. It simplifies the process of mailing into a single system, streamlining the process of sending letter mail and large envelopes and tracking inbound package deliveries. Designed for mid-sized to small mail areas, the s1500 offers superb flexibility.

No More Manual Sorting

The system comes as standard with a 5kg integrated weighing platform for

large envelopes and packages, while the onboard Weigh-on-the-Way and Dimensions-on-the-Way online features mean that manual sorting of mixed mail is no longer necessary. Users can also simultaneously print marketing messages in black or 4-process colour. With the package-receiving application and optional scanner, all incoming items can be logged and the recipients advised by email, so there is an accurate history of every item that has been delivered to the office.

The s1500 greatly simplifies office workflow by integrating mailing and receiving functions

Authorised independent inspector and maintainer of franking machines

We go **Beyond Mailing**

Mailmark Franking

Mailmark technology applies an intelligent 2D barcode that helps track mailed items with extreme precision. Royal Mail guarantees that items sorted using Mailmark will always benefit from the cheapest tariff available. The system also provides immediate price updates, faster franking and routine tracking reports, superseding SMART enabled franking machines.

Mixed Mail - WOW & DOW

The inline Weigh-on-the-Way and Dimensions-on-the-Way features provide the ability to automatically process mixed outbound mail, by verifying the length, width, thickness and weight of each item as it travels through the franking machine. There is no need to pre-sort mail into the same sizes and weights, so high volume mail runs become effortless, with the correct postage rate applied every time.

Envelope Messaging

To make the most of franked mail, you can turn every sent item into a powerful promotion, with your company logo and/or marketing message printed alongside the postage. With various pre-loaded options and bespoke settings, you can change the message by department, priority, season or offer, providing a professional finish without the need for printed stationery.

Postage Reporting

By linking the machine's postage meter directly to your secure online account, Inview Analytics provides easy-to-use access to every element of your postal expenditure. There are numerous standard reports to help manage your mail, or you can customise the system to your reporting requirements. This functionality is completely scalable for all business sizes and sites, providing world-class management and control, to help you save more.

Inbound Management

The receipt and management of inbound packages is streamlined, using onboard software and an optional digital scanner. The system instantly logs package information, including courier, recipient, sender and date & time of receipt, offering the option of alerting the in-house recipient by email. Total mailroom time savings of up to 75 minutes per day are possible.

Online Connectivity

The system's web-enabled architecture provides online access to the internet, facilitating the downloading of updated software, the replenishment of postage values, access to Royal Mail services, tracking of packages and more, all via the colour touch-screen display. This facility also allows high-speed transfer of data to and from the system.
